

Email Operations Dashboard

Sample Power BI layout based on AHT_Thread_Fact | Period: Jan-Jun 2026 | All Responsible Teams

AVERAGE HANDLING TIME

31.4 h

Department average

FIRST CONTACT RESOLUTION

68.2%

3,288 of 4,821 threads

FIRST ANSWER <=48H

91.5%

4,102 compliant responses

CONVERSATION VOLUME

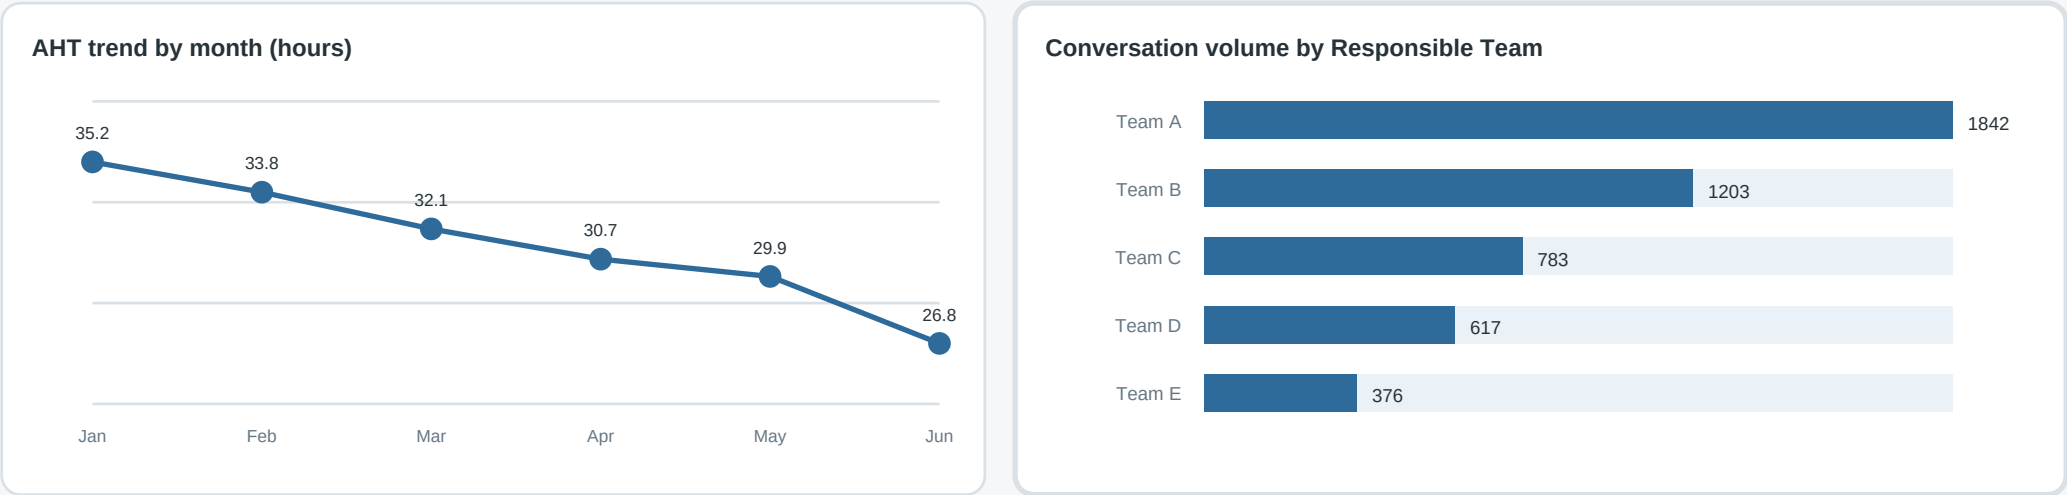

4,821

Unique email threads

TOP SENDER

Client A

482 conversations

Team performance snapshot

Responsible Team	Volume	Avg AHT	FCR %	48h SLA %	Avg First Response
Team A	1,842	28.4 h	72.1%	94.2%	13.8 h
Team B	1,203	36.7 h	61.8%	87.5%	21.3 h
Team C	783	25.1 h	75.4%	96.1%	10.7 h
Department	4,821	31.4 h	68.2%	91.5%	15.9 h

Dashboard Build Plan

Recommended visuals, measures and interactions for Page 1

1. KPI cards

Average Handling Time	AVERAGE of Handling Hours where Include In AHT = TRUE
First Contact Resolution	Threads with Email Count = 2 / total eligible threads
First Answer <=48h	TRUE SLA responses / conversations with a first response
Volume	DISTINCTCOUNT of Unique Subject ID
Top Sender	First Sender ranked by conversation volume

3. Recommended Page 1 visuals

Top row	5 KPI cards
Middle left	Monthly AHT trend
Middle right	Volume by Responsible Team
Bottom	Team performance matrix
Optional	Top 10 sender table / bar chart

2. Core slicers and drill path

- Date hierarchy: Year > Quarter > Month > ISO Week
- Responsible Team: primary ownership filter
- First Sender Type: useful for separating external vs internal demand
- Cross-filtering: team bar, sender table and trend charts filter all KPI cards
- Drill-through page: Unique Subject ID for conversation-level investigation

4. KPI definition notes

- FCR: current proxy = exactly 2 emails in the thread.
- Best FCR definition: first sender External + second sender Internal + Email Count = 2.
- 48h SLA: weekend hours are excluded; unanswered threads should be shown separately.
- AHT period attribution: use Received Date, not Resolution Date, for consistent cohort reporting.
- Department AHT must average underlying threads, not team-level averages.

Suggested next dataset enhancement

Add Second Sender and Second Sender Type to AHT_Thread_Fact so First Contact Resolution can validate the receive -> reply pattern rather than relying only on Email Count = 2.
